

## PJM System-Wide Generation Fuel Mix

### Power Sources

Sources of electricity for all Direct Energy customers in the reporting period 1/1/2015 - 12/31/2015 was met by generation from the following sources.

Sources of electricity supplied for the 12 months ending 12/31/2015.

Source	Percentage of total
Coal	36.5840
Oil	0.2833
Natural Gas	22.9772
Nuclear	35.7741
Hydro	1.0475
*Biomass	0.0000
*Captured Methane Gas	0.3156
*Solar Voltaic	0.0686
*Solid Waste	0.5472
*Water	0.0000
*Wind	2.1289
*Wood/Wood Waster	0.2419
<b>Total:</b>	<b>100%</b>
*Renewable Energy Resources Subtotal:	3%

### Air Emissions

Carbon dioxide (CO<sub>2</sub>), nitrogen oxides (NO<sub>x</sub>), and sulfur dioxide (SO<sub>x</sub>) emission rates for the PJM Regions.

### PJM SYSTEM MIX - Emissions

Emission Type	Lbs. per MWH	Percentage of PJM Regional Average
Carbon Dioxide	1014.2865	100%
Nitrogen Oxides	0.7758	100%
Sulfur Dioxide	1.6111	100%

The benchmark emission levels that are shown approximate the emission rate for all electricity generation in the PJM region. Data used to calculate the emission profile came from generator owner-entered values, EPA generator-specific emission factors based on 2004/2005 CEMS data, EPA plant emission factors from eGRID or fuel type default. CO is a "greenhouse gas" which may contribute to global climate change. SO and NO<sub>x</sub> released into the atmosphere react to form acid rain. Nitrogen Oxides also react to form ground level ozone, an unhealthy component of "smog."

One hundred percent of the total electricity supplied was purchased from other suppliers and the amount of nuclear waste attributable to producing this electricity is not known and is not included in this table.
